

SPEED YOU CAN GOVERN

How banks, insurers, and healthcare organizations increase software-delivery velocity without losing control.

FASTER, AND STILL IN CONTROL

Every regulated enterprise gets the same two instructions. **Move faster.** **Keep everything under control.** Most teams treat that as a trade-off. The organizations pulling ahead treat it as one problem with one answer.

Speed and control stop fighting when you design for both from the start.

NEARSHORE ADDS CAPACITY AND SPECIALIZED TALENT

Nearshore teams work in your time zone, join your standups, and bring specialists you cannot always hire locally. You add capacity without adding coordination drag. For regulated work, shared hours also mean faster reviews and cleaner handoffs.

AGENTIC SDLC INCREASES WHAT EACH DEVELOPER CAN DELIVER

An agentic SDLC puts AI to work across the whole software development lifecycle, not just autocomplete. With CI&T FLOW, our proprietary AI system, teams spend less time on boilerplate and more on the decisions that need judgment. Same team, more output.

GOVERNANCE CONNECTS THE TWO

Capacity and AI only help if you can prove what happened. Governance is the connective tissue: clear ownership, auditable steps, and controls built into the workflow instead of bolted on after. That is what lets a regulated enterprise move quickly and answer to a regulator in the same week.

THE NUMBERS, FROM BOTH WORLDS

Banking & Financial Services:

Bradesco

2.7X MORE PRODUCTIVE

Porto Seguro, twice the work delivered at

33% LOWER COST

Itaú

20% FASTER DELIVERY

Jeitto

87% MORE PRODUCTIVE TEAM

Healthcare & Life Sciences:

Albert Einstein Hospital

**4X MORE
PRODUCTIVE**

Medline

**3X MORE
PRODUCTIVE**

WHERE TO START

Pick one team and one workflow. Add nearshore capacity where the backlog is real, put an agentic SDLC on the work that repeats, and wire in governance from day one. Small, measured, and yours to expand.
